PROOF OF CONCEPT

## THE GERONTE PROJECT

Streamlined **Geriatric** and **Oncological** evaluation based on IC **Technology** for holistic patient-oriented healthcare management for older multimorbid patients

**GerOnTe** is a 5-year research and innovation project (April 2021 to March 2026) funded by the European Union within the framework of the H2020 Research and Innovation programme. **The overall aim of GerOnTe is to improve quality of life – defined as well-being on three levels : global health status, physical functioning and social functioning- for older multimorbid patients, while reducing overall costs of care.** To this end, **GerOnTe** will co-design, test, and prepare for deployment an innovative cost-effective patient-centred holistic health management system, hereafter referred to as the **GerOnTe** intervention.

**A harmonised health management system taking into account patient's diseases in a global way, and not individually, would improve care quality and patient quality of life, while decreasing costs**

## OBJECTIVES

### INFORMATION

Gather the stakeholders and data needed for patient-centred and multi-actor complex decision-making process and management.

### TOOLS

Develop Holis™ GV ICT tools for the GerOnTe intervention to be implemented.

### METHODS

Socio-economical methods for evaluating the impacts of the implementation of the GerOnTe intervention.

### DEMONSTRATION

Demonstrate in 16 study sites from three EU countries the feasibility and effectiveness of the GerOnTe intervention.

### REPLICATION

Develop recommendations for the replication of GerOnTe best practices in all European health systems.

### ENGAGEMENT

Engage all stakeholders by co-designing the GerOnTe intervention.
